

**October 17, 2022**

Point Energy Management is currently seeking candidates to fill the position of:

**(Senior) Production Engineer – RL/GL**

Job Role:

- Work closely with Field Operations, Completions, Drilling and Subsurface Teams
- Design Rod Lift & Gas Lift installations to provide the highest possible production and reliability
- Work to optimize RL/GL wells
- Responsible for field operation of RL/GL wells, including surface equipment, wellhead and flowlines through to pad edge
- Manage surveillance of RL/GL wells through LiftIQ, ProductionLink and ProdView
- Troubleshoot / investigate RL/GL wells, including running parameters, surface equipment conditions and wellhead / flowline pressures
- Assist in pad readiness for artificial lift workovers and support bring wells online following completion of workover
- Help evaluate effectiveness of chemical program

Preferred Background:

- 7 years of experience in engineering
- Experience with well performance analysis, decline/rate-time analysis, economics analysis
- Exposure to well completions, production operations and workover operations
- 5 years of direct experience as an Engineer in the Permian Basin
- Demonstrated proficiencies in artificial lift methods, especially rod pumps, gas lift, and ESP
- Ability to size, monitor, optimize, evaluate, and trouble shoot different artificial lift methods
- Takes ownership of actions and follows through on commitments by holding others accountable and standing up for what is right
- Builds effective solutions based on available information and makes timely decisions that are safe and ethical
- Listens actively and invites new ideas for exchanged opinions, then influences and acts to drive positive performance and achieve results
- Builds positive relationships based on trust and seeks collaboration across organizational boundaries to achieve goals
- Build effective solutions based on available information and make timely decisions to benefit production
